

# Name: Daniel Owie

## Day 2: HTML-Basics

### Summary Of The HTML Structure

In the new HTML structure of our website, I used all sorts of tags which include: img, p, div, h1, h3, h4, form, textarea, hr, br, video, header, footer, a, li, nav, button and input. All of these tags have helped in building a good and stable website structure with texts, images, videos, forms, buttons and navigation bars.

### Changes

While creating the HTML structure of our website I made a few changes; which are:

### Grammar Correction

While going through the website I noticed a lot of grammar errors. Some of these were: use of punctuations, use of capitalization and use of grammar.

### Use of characters

While going through the website I also noticed the character “#” being used very wrong. Instead of using the character “#” I used the comma sign (“,”).

### Use of Images

A lot of unnecessary images were used in the website; these images distract the main focus of the website.

### Sentence Layout

Another turnoff I noticed on the website was the way sentences were used. First of all, there was so much space between each line and it made the website look unprofessional. Second of all, the way sentences were introduced was very wrong. The sentences did not mention who provided services. They were meant to have said who provides the services; which is PRKS Consulting.

## Rationale behind the changes

These are all my reasons for the changes to the original layout.

## Grammar Corrections

Without correct grammar usage people would not understand what we do and we would not get clients. So changes are needed for the best understanding of what we do.

## Use of Characters

Without correct use of characters it would be confusing for people who read it. So using correct characters is essential for a good presentation.

## Use of Images

The use of some images were useless, because they do not prove any important fact. So those were excluded completely.

## Sentence Layout

Without good sentence layout the main point of the sentence is ignored and that makes it difficult to understand.

## Questions and issues encountered

- Where do I access images and videos?

- Where do I get social media icons and links?
